DETAILED ACTION

Allowable Subject Matter

1. Claims 1-31,33,36,40,42,45,49-69 are allowable over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

As per the independent claims, the claim language pertaining to the exact structure of the codebooks (in terms of bit allocation), are not explicitly taught by the prior art of record. Jacobs et al (5778338) teaches a speech encoding system detecting a transition during speech (col. 14 lines 52-61); an encoder performing an encoding scheme to preprocess the signal based on a voicing of the signal (as varying the encoding scheme based on the degree of voice of the signal -- col. 3 lines 1-11; col. 14 lines 6-51); a selector for choosing a second encoding scheme (as selecting different encoding based on encoding rates -- col. 14 lines 24-61, determining the speech characteristic between voiced, unvoiced, or noise (col. 14 lines 52-61), perceptual filtering and a pitch preprocessing module determining a target signal for time warping (as input speech being modified by the closed loop and open loop format residual equations -- fig. 14, subblock 570-576; thru the pitch synth filter (fig. 14, subblock 552; figs. 16,18, and 19)); and pitch tracking (as pitch preprocessing and calculating the varying pitch lag -- col. 8 lines 26-46), fixed codebook (col. 38 lines 1-24), adapted codebook use for storing residual samples of LPC coefficients (col. 30 lines 28-36), bit allocation dependent upon the

Art Unit: 2655

various thresholds, wherein the bit allocation is in the form of a quadratic ratio (col. 14 lines 15-16; col. 16 lines 49-67), full rate coding determining a voicing level, that is, voice and/or noise (col. 14 lines 15-61), selecting multiple encoding rates based on bit rate (col. 7 line 53 – col. 8 line 41 -- note the differing rates), receiving a speech frame for encoding (as input speech, Fig. 8), classifying the speech frame as voiced if the speech includes a voicing component (col. 3 lines 1-9), designating the speech frame as stationary or non-stationary if the speech frame is as such (as determining, not only two levels of speech, but multiple levels of speech, or the degree of voicing, --col. 14 lines 6-51); and allocating a lesser number of bits for the voice speech frame than for the non-stationary voice speech frame (as bit allocation dependent upon various thresholds -- col. 14 lines 15-16, col. 16 lines 49-67, wherein the voiced frame receives less number of bits); however, as with Jacobs, none of the prior art of record specifies the bit allocation as noted above in the claim language of the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
